

EXPECT A HEALTHY BABY.

**Get tested.
Protect your baby
from syphilis.**

Congenital Syphilis is a sexually transmitted infection (STI) that occurs when a mother with syphilis passes the infection on to her baby during pregnancy or delivery. If left untreated, it may cause serious problems for your baby, or even death. Not all mothers with syphilis present with symptoms, which is why it is critical to get tested early and throughout pregnancy. Testing for syphilis is free and easy, and the infection is treatable with simple antibiotics. Have a conversation with your doctor or county health department.
